(54) Title: HEATED SUBSTANCE RESERVOIR BAFFLE

(57) Abstract: A heated water reservoir for use as a heated water dispenser, in conjunction with a beverage dispenser or for other uses. The heated water reservoir (5) includes a baffle (20) which communicates with an outlet port (7) positioned along the reservoir and an upper portion of the reservoir. In the reservoir a quantity of water is retained in a heated condition with an upper portion of the reservoir containing generally heated water of a higher temperature. An upper edge (35) of the baffle is positioned relative to the upper portion of the heated water reservoir such that passage of water from the reservoir into a cavity (22) defined, at least in part, by the baffle facilitates flow of water over the upper edge and into the outlet port. In this manner, water having a higher temperature is dispensed from the reservoir.

NEW ADDIFACT

A heated water reservoir for use as a heated water dispenser, in conjunction with a beverage dispenser or for other uses. The heated water reservoir (5) includes a baffle (20) which communicates with an outlet port (7) positioned along the reservoir and an heated water reservoir (5) includes a baffle (20) which communicates with an outlet port (7) positioned along the reservoir and an HEAREN WALEY (POSITION (2) INCLUSES A DATHE (AU) WAIREN COMMINIONALES WHA AN OUNSE PORT (1) POSITIONED ANOREM TO THE POSITION OF the RESERVOIR AND AUGUST upper portion of the reservoir. In the reservoir a quantity or water is retained in a nested condition with an upper portion of the reservoir containing generally heated water of a higher temperature. An upper edge (35) of the baffle is positioned relative to the upper portion of the heated water reservoir such that passage of water from the reservoir into a cavity (22) defined, at least in part, by the baffle facilitates flow of water over the upper edge and into the outlet port. In this manner, water having a higher temperature is dispensed from the reservoir.
